

Are you an **adult with a urinary catheter** which has been in place for **three months or longer**?
If you manage your catheter yourself and you **live at home in the UK**, we would like to speak to you!

We are a team of researchers from the School of Pharmacy at Queen's University Belfast who are conducting a study which aims to gather information about catheter users' experiences of living with long-term urinary catheters and dealing with any complications, and perspectives of potential improvements for catheter design. The study will involve taking part in an interview with a researcher (Ahmad Rabi), face-to-face, by telephone or using an online platform such as Microsoft Teams or Skype. The interview will last approximately **30 minutes**. **We need you** to help us to better understand the issues experienced living with a long-term catheter. This will help us to develop ways to improve the use of urinary catheters and to inform future practice. **Let your voice be heard** by contacting the researcher Ahmad Rabi via email (Arabi01@qub.ac.uk) or telephone (07522330460) for more information.
